+54 9 2944 69-1027 | seba.saporiti@gmail.com | Argentina

Software Engineer specialized in **React, React Native, and Next.js**, with over **5 years of experience building scalable web and mobile products**.

My work focuses on developing **clean, fast, and user-centered interfaces**, using **TypeScript, React, and Node.js** within modular architectures that improve performance and support the product's long-term evolution.

In every project, I aim for technology to not only work but to **solve a real problem while remaining scalable**. That's why I actively collaborate with design, product, and backend teams to turn technical requirements into **intuitive and sustainable experiences**.

Among my main achievements is the **complete rebuild of a legacy system used by more than 60,000 users across LATAM**, reducing search times by **10x** and improving operator satisfaction.

Today, my focus is on continuing to grow as a **React Native and Fullstack Developer**, delivering value on projects that prioritize **code quality, usability, and long-term scalability**.

SKILLS

Frontend Development: TypeScript, JavaScript, CSS3, React, React Native, Next.js, Tanstack, Redux, Zustand, Context API, React Router v6, TailwindCSS, Sass, Bootstrap, Material UI, Chakra UI, Polaris, Shadcn/ui, Styled Components

Backend & Database: Node.js, Express, Firebase (Firestore, Authentication, Storage), Supabase, REST APIs, NoSQL, API design, PDF generation, automated emails, notifications

Mobile Development: React Native, Expo, Android Studio, Xcode basics, push notifications, API connections, responsive design

Architecture & Dev Practices: Component-driven architecture, modular code organization, Clean Code principles, performance optimization & lazy loading, responsive & adaptive design, version control & branching strategies (GitFlow)

Tools & Platforms: Git, GitHub, GitLab, Jira, Trello, Notion, Contentful, Shopify (Polaris, Storefront APIs), Salesforce integration, Visual Studio Code, Postman, Slack, Zoom, Figma (UI review & handoff)

Methodologies: Agile (Scrum, Kanban), code reviews & pair programming, CI/CD fundamentals, cross-functional collaboration

Soft Skills: Proactivity and technical autonomy, effective communication with design and product teams, user- and detail-oriented mindset, responsibility and commitment to deliverables, continuous learning, analytical thinking and problem solving, adaptability to global remote environments

LANGUAGES

Spanish: Native (C2)

English: Advanced (C1)

PROFESSIONAL EXPERIENCE

Aerolab – Software Engineer

Remote | Jan 2025 – Present

- Development and maintenance of digital products for international clients, using React, Next.js, and TypeScript within a scalable, modular ecosystem.
- Participation in code reviews and definition of architectural best practices that improve maintainability and code quality.
- Implementation of UI components and interaction flows based on TailwindCSS and Shadcn/ui, optimizing visual performance and user experience.
- AI integrations in workflows to improve search systems and profile enrichment.
- Development of internal AI tools to streamline workflows across teams, as well as upselling features for clients.

Results:

- Reduced rendering and load times on critical components, improving overall site performance by more than 30%.
- Increased design consistency across products by implementing a unified system of reusable components.
- Significant reductions in search and loading times for platform profiles.
- Improved accuracy and quality of information in user profiles.

Stack: React, Next.js, TypeScript, TailwindCSS, Shadcn/ui, Salesforce, Git, Agile/Scrum

Online Procesamientos – Software Engineer

Remote | May 2024 – Present

- Design and development of a management platform for property administrators, replacing manual processes with automated digital workflows.
- Built the full frontend and backend architecture using React, TypeScript, and Firebase, integrating authentication, PDF generation, email delivery, and automatic notifications.
- Implementation of reporting and operational control tools, improving the traceability of administrative data.

Results:

- Reduced operational load times by 40%, improving end-user efficiency.
- Decreased human error in report generation through internal automations.

Stack: React, TypeScript, Firebase, TailwindCSS, Shadcn/ui, React Router v6, GitHub Actions, Agile/Scrum

GM2 – Software Engineer

Remote | Jul 2022 – May 2024

- Development of web and mobile applications for clients across different sectors (healthcare, e-commerce, aeronautics) with React, React Native, Next.js, and TypeScript.
- Implementation of data flows, performance optimization, and maintenance of scalable components.
- Active participation in pair programming, technical documentation, and the definition of internal development standards.

Results:

- Contributed to high-impact projects, including:
 - Znest: improvements to the search flow that enhanced the end-user experience.
 - ReKeepit: development of a Shopify widget that increased customer retention through personalized discounts.
 - DroneUp: built the dashboard for aeronautical authorities, improving real-time operations management.

Stack: React, React Native, Next.js, TypeScript, Redux, Chakra, Vue, TailwindCSS, Contentful, Agile/Scrum

Bowery Creative Studio – Front-End Engineer

Buenos Aires, Argentina | Mar 2021 – Jul 2022

- Development of scalable and responsive interfaces with React and React Native, prioritizing user experience optimization.
- Direct collaboration with UX/UI designers and backend developers to improve navigation flows and accessibility.
- Rebuilt legacy systems with modern component architectures.

Results:

- Participated in the full redesign of KeepSmiling, used by more than 60,000 users across LATAM, achieving a 10x reduction in search times and a more intuitive interface.
- Increased operator efficiency by simplifying the platform's internal processes.

Stack: React, React Native, TypeScript, Redux, Bootstrap, REST APIs, Git, Agile/Scrum

EDUCATION

Technician in Automation and Control Systems

Instituto Técnico Superior, Argentina | 2017

- Technical training focused on electronics, embedded systems, and industrial control, with an emphasis on logical problem solving and systemic thinking.

- Strong foundation in **structured programming, automation, and technological processes**, now applied to scalable software development.
